Regumate® Equine 2.2 mg/ml oral solution for horses

Species: Horses only

Therapeutic indication: **Pharmaceuticals: Hormones and therapeutically related products:** Other sex hormones

Active ingredient: Altrenogest

Product: Regumate® Equine 2.2 mg/ml oral solution for horses

Product index: Regumate® Equine

Withdrawal notes: Horse meat/offal: 9 days

Incorporating:

Qualitative and quantitative composition

Each ml contains:

Active substance:

Altrenogest 2.20 mg

Excipients:

Butylhydroxyanisole (E320) 0.07 mg

Butylhydroxytoluene (E321) 0.07 mg

Sorbic acid (E200) 1.50 mg

Benzyl alcohol 10.00 mg

For a full list of excipients, see section "Pharmaceutical Particulars".

Pharmaceutical form

Oral Solution. Clear, light yellow oily solution.

Clinical particulars

Target species

Horses (mares)

Indications for use

In mares with significant follicular activity during the transitional period between seasonal anoestrus and the breeding season (follicles of at least 20–25 mm present at the beginning of treatment):

- Suppression/prevention of oestrus (usually after 1 to 3 days of treatment) during the prolonged oestrus periods occurring during this period.
- Control of the time of initiation of oestrus (approximately 90 % of mares show signs of oestrus within 5 days following the end of treatment) and synchronization of ovulation (60 % of mares ovulate between days 11 and 14 following the end of treatment).

Contraindications

Do not use in mares where uterine infection has been diagnosed.

Do not use in males.

Special warnings for each target species

In order to ensure effective use of the product, the presence of follicular activity in mares must be confirmed during the transitional period.

Special precautions for use

The medicated feed should be offered to mares being treated as soon as the product has been added, and not stored. Part consumed feed must be safely destroyed and not given to any other animal.

Operator warnings

- Women who may be, or are pregnant, should not use the product. Women of childbearing age should avoid contact with the product.
- This product should not be handled by persons with known or suspected progesterone-dependent tumours or thrombo-embolic disorders.

- Direct contact with the skin should be avoided. Personal protective clothing (gloves and overalls) must be worn when handling the product. Porous gloves may let this product pass through. Transcutaneous absorption may be even higher when the area is covered by an occlusive material, such as latex or rubber gloves. Accidental spillage on the skin should be washed off immediately with soap and water.
- Wash hands after treatment and before meals.
- In case of incidental contact with eye, rinse thoroughly with water for 15 minutes. Get medical attention.
- Effects of overexposure: repeated accidental absorption could lead to disruption of the menstrual cycle, uterine or abdominal cramping, increased or decreased uterine bleeding, prolongation of pregnancy or headache.

Adverse reactions

Adverse reactions, such as uterine infection, are extremely rare.

Use during pregnancy or lactation

Pregnancy:

Not applicable.

However, accidental administration is not detrimental as studies in mares have not produced any evidence of teratogenic, foetotoxic or maternotoxic effects.

Lactation:

Use during lactation is unlikely to have detrimental effects.

Interactions

Griseofulvin may alter the effects of altrenogest if administered concomitantly with this product.

Amounts to be administered and administration route

For oral administration.

0.044 mg altrenogest per kg body weight per day, for 10 consecutive days.

Carefully withdraw the volume of product corresponding to the mare body weight (1 ml per 50 kg body weight) and administer this volume via oral route.

- 150, 300 and 1000 ml bottles: Wearing gloves remove the original cap and in its place screw on the luer lock cap. Keeping the bottle upright, screw the syringe onto the luer

lock cap orifice, turn the bottle upside down, and carefully withdraw the solution from the bottle using the syringe.

Turn the bottle right way up before detaching the syringe. Securely replace the small cap on the luer lock cap.

- 250 ml bottles: Remove the white cap and the aluminium foil seal from the neck of the measuring compartment. Keeping the bottle upright, press the body of the bottle until the required volume of product is accumulated into the measuring compartment. Carefully pour the content of the measuring compartment on the mare feed.

The product should be added to the mare's feed, at a single feeding per day, or directly administered into the mouth using a syringe.

Overdose

No negative effects have been observed in horses following up to five times the recommended dose of altrenogest for 87 days and at the recommend dose for continuous periods up to 305 days.

Withdrawal periods

Meat and offal: 9 days.

Not authorised for use in lactating animals producing milk for human consumption.

Pharmacological particulars

ATCvet code: QG03DX90.

Pharmacotherapeutic group

Sex hormones and modulators of the genital system,

Pharmacodynamic properties

Altrenogest is a synthetic trienic C21 steroidal progestagen, belonging to the 19-nor-testosterone series. It is an orally active progestagen. Altrenogest decrease blood concentrations of the endogenous gonadotrophins, LH and FSH. As a consequence, it induces the regression of all large follicles

(>20–25 mm) and therefore blocks oestrus or ovulation. During the second half of the treatment period with the product, when all large follicles have regressed, there is a peak in FSH concentration which initiates a new wave of follicular growth. End of treatment is followed by a steady rise in LH concentration, which sustains follicular

growth and maturation. These endocrine effects ensure that most mares ovulate during the four day period between days 11 and 14 after the end of the treatment course.

Pharmacokinetic properties

Altrenogest is rapidly absorbed following oral administration and can be detected in blood as soon as 10 minutes after dosing. Maximum serum concentrations are observed 2.5 hours following administration. Altrenogest is extensively metabolised in the liver. The terminal half-life following oral administration is 10.7 hours \pm 4.3 hours. Altrenogest is eliminated both via urine and faeces, in similar proportions.

Pharmaceutical particulars

Excipients

Butylhydroxyanisole (E320)

Butylhydroxytoluene (E321)

Sorbic acid (E200)

Benzyl alcohol

Triglyceride Medium chain

Major incompatibilities

None known.

Shelf life

Shelf-life of the veterinary medicinal product as packaged for sale: 3 years.

Shelf-life after first opening the immediate packaging:

•150 ml bottle: 14 days.

•250 ml, 300 ml and 1000 ml bottles: 28 days.

Special precautions for storage

This veterinary medicinal product does not require any special storage condition.

Immediate packaging

The product is packaged in brown opaque 150, 250, 300 and 1000 ml polyethylene bottles sealed by an aluminium protective cap and closed by a plastic screwed-on stopper.

The 150 ml, 300 ml and the 1000 ml bottles are provided with a luer lock cap which, when screwed on the bottle neck, allows the user to safely and accurately withdraw the product with a syringe that can directly adjust on the luer lock cap.

The 250 ml bottle is equipped with a 12.5 measuring compartment.

Not all pack sizes may be marketed.

Disposal

Any unused veterinary medicinal product or waste materials derived from such veterinary medicinal product should be disposed of in accordance with local requirements.

Part consumed feed must be safely destroyed and not given to any other animals.

Marketing Authorisation Number

UK: Vm 01708/4503

Significant changes

Date of the first authorisation or date of renewal

27 October 2009.

Date of revision of the text

August 2020.

Any other information

For animal treatment only. Keep out of the sight and reach of children.
